Does Hydrawise support watering restrictions?

Yes! You should use **Program Start Times** to set the times that your Hydrawise system is permitted to water. When adding a start time, you can choose odd or even days or select a specific day of the week to permit watering. This is also where you'll set the time the watering cycle should start.

To learn more about Program Start Times, click [here](#) [1].

Program Start Times are the times that your Hydrawise system is permitted to water.

NOTE: Your system will not necessarily water every zone for every one of your program start times. Remember that the purpose of a program start time is to specify the times each zone is allowed to water.

If you have a **Watering Schedule** (under the *My Watering Zones* menu) configured to water every day but your settings in the **Program Start Times** don't allow your system to water on a particular day, we won't water on that day.

If you have a **Watering Schedule** set up to water once a week, we will water as long as we are permitted to water on that day. If we aren't permitted to water on a particular day, we will water on the next permitted day.
