Take control of your irrigation!

Control your irrigation system from your iPad or iPhone or Android from anywhere in the world! Save water when Hydrawise intelligently adjusts your sprinkler's watering schedule to suit your local weather conditions. No more wasted water. No more drowning plants.

Save Time

Use your iPhone, Android device or web browser to access our easy-to-use interface. You decide how much water your garden needs and Hydrawise will take care of the rest.

Save Money

Automatically adjust your watering depending on local weather conditions. Experience a 50% average water saving compared to a controller with a fixed schedule.

Save Your Plants

Let your garden thrive without wasting precious water. Hydrawise waters more when it's dry and less when it's wet, so your plants always have the right amount of water.

"Since we installed our Hydrawise Irrigation Controller our water bill has gone from \$137 a month down to \$74 in the hottest part of the summer here in Las Vegas. This is the lowest it has ever been in the past 15 years for summer watering. Thank you so much for providing a great product with such super support and user friendly management of our system. "

Darlene, Las Vegas, USA

EASY TO USE

Simple and straight forward installation and configuration was at the top of our list when creating the Hydrawise controller.

Simply enter your wireless password on the controller's touchscreen and complete configuration using our iPhone or Android app or web browser.

View your watering schedules and full reports online.

FIND OUT HOW MUCH WATER YOU USE

Hydrawise's flow meters allow you to detect broken pipes, spray heads and faulty wiring or valves. The Hydrawise interface allows you to view the water usage for each watering cycle and set up email or SMS alerts when a zone's water usage is abnormal.

Don't lose plants or get massive water bills just because your irrigation system failed you!

REPLACE YOUR EXISTING SYSTEM WITHOUT EXTRA WIRES

Replace your existing controller with no extra wires

The Hydrawise controller uses your wifi network to access the internet directly through your router – no need to leave your computer on or make any network changes. Simply enter your wireless password into the unit and you're done!

Hydrawise is fully compatible with traditional 24V AC irrigation controllers so you can rip and replace in no time!

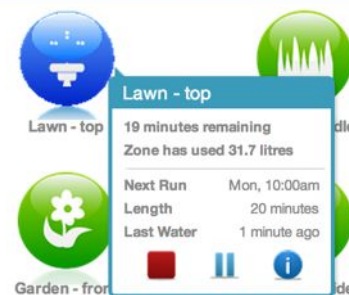

SAVE UP TO 50% ON YOUR WATER BILLS

Hydrawise uses your wireless internet (wifi) to access a live stream from weather stations close to you.

So with Hydrawise your garden's watering is based on the best available, up-to-date information on the weather conditions in your area without any need for you to install your own weather station or rain sensor.

See what weather stations are available in your area using our interactive maps.

Watering Schedule for Blairgowrie

SPECIFICATIONS

Zones

- 6/12 zone models (expandable)
- Master valve support using zone output
- Multiple controllers per account
- Short circuit protection with undercurrent and overcurrent detection
